

PPR Acquisition Results — July 19, 2026

Rate scenario: data_derived · results generated 2026-07-19.

Results

Value created over the baseline

[Commentary — replace this text with your notes before Table 1.]

Table 1: Conservation value created over the do-nothing baseline, by scenario.

Scenario	Greedy		Myopic		Rolling	
	% over baseline	Δpairs	% over baseline	Δpairs	% over baseline	Δpairs
RCP 4.5 wet	0.40%	118,094	0.61%	181,601	0.71%	211,132
RCP 4.5 dry	0.34%	80,419	0.54%	127,457	0.62%	144,783
RCP 8.5 wet	0.36%	118,867	0.58%	187,737	0.67%	218,767
RCP 8.5 dry	0.33%	69,721	0.49%	103,874	0.58%	122,121
Stationary	<0.0001%	8	<0.0001%	8	<0.0001%	8

% over baseline = value_added / J_baseline × 100 (improvement over the do-nothing landscape). Δpairs = value_added (discounted duck-pairs gained vs. baseline).

[Commentary — replace this text with your notes after Table 1.]

Gap versus deterministic foresight

[Commentary — replace this text with your notes before Table 2.]

Table 2: Value-added gap vs. rolling (deterministic foresight), by scenario.

Scenario	Greedy		Myopic	
	gap %	Δ pairs	gap %	Δ pairs
RCP 4.5 wet	44.07%	93,038	13.99%	29,531
RCP 4.5 dry	44.46%	64,363	11.97%	17,326
RCP 8.5 wet	45.67%	99,900	14.18%	31,030
RCP 8.5 dry	42.91%	52,400	14.94%	18,248
Stationary	1.19%	<1	1.49%	<1

gap % = shortfall as % of rolling's value-added. Δ pairs = rolling value-added – model value-added (discounted duck-pairs).

[Commentary — replace this text with your notes after Table 2.]

Shortfall accumulating over time

[Commentary — replace this text with your notes before Figure 1.]

Figure 1: **Prevented-loss shortfall vs. optimal.** Cumulative gap versus rolling (discounted duck-pairs) accumulating over the horizon, by climate scenario. Rolling is the deterministic-foresight benchmark (gap = 0).

[Commentary — replace this text with your notes after Figure 1.]

Landscape decline

[Commentary — replace this text with your notes before Figure 2.]

Figure 2: **Landscape decline under each climate future (rolling policy).** All scenarios share the 2020 anchor (5.11M pairs). Policies are near-indistinguishable at landscape scale ($\sim 0.6\%$ of total) — the separation lives in value-added.

[Commentary — replace this text with your notes after Figure 2.]

Where foresight changes the target set

[Commentary — replace this text with your notes before Figure 3.]

Figure 3: **Rolling vs. myopic acquisition sets.** EAUs coloured by which policy buys them under each climate scenario; foresight adds the blue cells and avoids the orange. Cells are 282 km² EAUs (ESRI:102039); grey = neither.

[Commentary — replace this text with your notes after Figure 3.]

Per-parcel prevented-loss difference

[Commentary — replace this text with your notes before Figure 4.]

Figure 4: **Per-parcel prevented-loss difference: rolling — myopic.** Blue: rolling invests here and prevents duck-pair loss; red: myopic invests here instead; grey: no difference. Coloured cells sum to the value-added gap. Colour is capped symmetrically at the 98th percentile of $|\Delta V|$.

[Commentary — replace this text with your notes after Figure 4.]

Updates

Temporal alignment of benefit data

[Commentary — replace this text with your notes before this table.]

Table 3: **Temporal alignment of benefit data: midpoint comparison.** One-time entry, transcribed from an external source; not produced by 10_results_assets.R.

Scenario	Greedy		Myopic		Rolling	
	Δ % over baseline	Δ pairs	Δ % over baseline	Δ pairs	Δ % over baseline	Δ pairs
RCP 4.5 wet	+0.02%	+2,600	+0.01%	+305	+0.02%	+885
RCP 4.5 dry	0.00%	-3,742	+0.01%	-5,335	+0.01%	-8,471
RCP 8.5 wet	-0.01%	-6,610	0.00%	-8,285	-0.01%	-11,626
RCP 8.5 dry	+0.01%	-1,135	+0.02%	-2,103	+0.02%	-2,965
Stationary	≈ 0	-1	≈ 0	-1	≈ 0	-1

Δ = change vs. the primary benefit alignment (midpoint comparison). One-time entry — edit the source note as needed.

[Commentary — replace this text with your notes after this table.]

Temporal alignment: gap vs. rolling

[Commentary — replace this text with your notes before this table.]

Table 4: **Temporal alignment of benefit data: gap vs. rolling (midpoint comparison).** One-time entry, transcribed from an external source; not produced by 10_results_assets.R.

Scenario	Greedy		Myopic	
	Δ gap %	Δ pairs	Δ gap %	Δ pairs
RCP 4.5 wet	-1.00%	-1,714	+0.22%	+581
RCP 4.5 dry	-0.62%	-4,731	-1.38%	-3,136
RCP 8.5 wet	+0.13%	-5,015	-0.74%	-3,341
RCP 8.5 dry	-0.44%	-1,829	-0.34%	-861
Stationary	-0.56%	0	+0.21%	0

Δ = change vs. the primary benefit alignment (midpoint comparison). One-time entry — edit the source note as needed.
